Team Introductions

Humayun Bilal

GitHub: gitFlyy

I am a sixth-semester Computer Science student at FAST University with a strong interest in software development and mobile application design. I have developed ZenFit, a Kotlin-based workout app, and a C++ Plants vs. Zombies game. I am passionate about problem solving, clean code, and building efficient, user-focused systems.

Muhammad Faheem

Github: MFaheemS

I am a sixth-semester Computer Science student at FAST University with a strong interest in intelligent systems and mobile application development. I have developed CookMate, a mobile recipe search and food application, and a Doctor AI Agent using Unity. I am passionate about creating innovative, user-centered solutions and continuously improving my technical skills

Irtaza Kazmi

Github: irtaza2005

I am a sixth-semester Computer Science student at FAST University with a strong interest in data structures, algorithms, and software development. I have developed a Heap Tree Data Visualizer in Python and an arcade of mini games in C++. I am passionate about writing efficient code and building interactive learning tools.

Role Assignments

Muhammad Faheem: Scrum Master

Irtaza Kazmi: Developer

Humayun Bilal: UI Designer

Team Agreement

1. Methods of Communication

Our team will primarily communicate through WhatsApp for quick discussions and updates, as it is accessible to all members. For formal communication and document sharing, we will use FAST email accounts and Google Drive. For technical discussions and code-related coordination, we will use GitHub issues and comments.

---

2. Communication Response Times

- WhatsApp: Within 2–3 hours during the day
- Email: Within 24 hours
- GitHub: Within 24 hours for pull request reviews or issue responses

All members are expected to inform the group in advance if they will be unavailable.

---

3. Meeting Attendance

We will hold **two meetings per week**:

- One **in-person meeting at FAST campus**
- One **online meeting via Google Meet**

All meetings are mandatory unless a valid reason is communicated beforehand. In case of absence, the member must review the meeting minutes and complete assigned tasks.

---

4. Running Meetings

- Meetings will be scheduled at a mutually agreed time.
- Physical meetings will take place in the **FAST lab or library**, while online meetings will be conducted via **Google Meet**.
- Each meeting will have:
    - A **meeting leader** (rotating role)
    - A **note-taker** responsible for writing minutes and uploading them to Google Drive.

- Meetings will follow a short agenda: progress review, blockers, task distribution, and deadlines.

---

5. Meeting Preparation

All members must:

- Complete their assigned tasks before the meeting
- Push their latest code to GitHub
- Prepare a short progress update
- List any issues they are facing

---

6. Version Control

We will use **GitHub** for version control with the following rules:

- Each feature will be developed in a **separate branch**
- Only **tested and working code** will be merged into the main branch
- Commit messages will be clear and meaningful (e.g., *"Implemented employee login authentication"*)
- We will not commit:
    - Build folders
    - IDE configuration files
    - Large unnecessary files

All merges will be done through **pull requests** and reviewed by at least one team member.

---

7. Division of Work

Work will be divided based on:

- Individual expertise
- Interest
- Workload balance

Task allocation will be decided during meetings through mutual discussion.

Stakeholders:

- Course instructor
- Lab instructor
- End users (HR/admin using the Employee Management System)
- Development team (our group)

---

8. Submitting Assignments

- All deliverables will be finalized **at least 24 hours before the deadline**
- One designated member will handle the final submission
- All team members will review the complete work before submission
- A final checklist will be followed to avoid mistakes

---

9. Contingency Planning

If a team member:

Drops the course:

- Their tasks will be redistributed among remaining members
- Priority will be given to core system features

Is consistently unresponsive:

1. The team will first communicate and offer support
2. Tasks will be reassigned if deadlines are affected
3. The instructor will be informed if the issue continues

All members are responsible for maintaining a cooperative and respectful working environment.
